Date	29 September 2026	Project ID	SWTID-2026-2363
Project Name	AI BlogNest	Maximum Marks	4 Marks

IDEATION PHASE

Brainstorm & Idea Prioritization Template

For **AI BlogNest**, the team brainstorms solutions around secure blog management, AI-assisted content creation, summarization, user roles, comments, categories, and tags. Ideas are first generated openly and then grouped and prioritized according to their importance and feasibility.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Before we collaborate

Goal

Define the project focus and users.

Build a secure backend platform for blog creation and content management.

Team gathering

Core discussion points

Discuss the needs of Admin, Editor, Author, and Reader. Share the project requirements and expected backend workflow.

- Blog CRUD
- AI generation
- AI summarization
- Authentication & roles
- Comments / moderation

Define the problem statement

Selected problem statement

Managing drafts, categories, tags, comments, approvals, and media can be difficult. AI BlogNest needs centralized management, secure role-based access, and AI assistance for generation and summarization.

"How can AI BlogNest simplify secure blog management while helping creators generate and summarize content efficiently?"

Step-2: Brainstorm, Idea Listing and Grouping (Initial Ideas)

Blog CRUD
Create, read, update, and delete blog posts.

AI Generation
Generate structured blog content from a topic/theme.

AI Summary
Produce concise summaries from longer blog content.

Authentication
JWT login and protected API operations.

Role Control
Admin, Editor, Author, and Reader permissions.

Categories & Tags
Organize blog content for easier management.

Comments
Reader comments and moderation workflow.

Security
bcrypt hashing, validation, sanitization & rate limiting.

Database
MongoDB + Mongoose models and validation.

Testing
Postman/Thunder Client API testing.

Error Handling
Centralized errors and structured logging.

Scheduling
Support content scheduling and editorial workflow.

Grouped Ideas

Group	Included Ideas
AI Content	AI Blog Generation; AI Content Summarization
Blog Management	Blog CRUD; Categories; Tags; Scheduling
Users & Access	JWT Authentication; Role-Based Access Control
Engagement	Comments; Comment Moderation
Security & Reliability	Validation; Sanitization; bcrypt; Rate Limiting; Logging; Error Handling
Backend & Testing	Node.js; Express; MongoDB; Mongoose; Postman/Thunder Client

Step-3: Idea Prioritization

Place each idea according to Importance and Feasibility. The placement below follows the documented AI BlogNest objectives and features.

HIGH IMPORTANCE / HIGH FEASIBILITY

- **AI Blog Generation**
- **Blog CRUD**
- **AI Summarization**
- **JWT & Role-Based Access**

HIGH IMPORTANCE / LOWER FEASIBILITY

- Advanced scheduling/editorial workflow
- Expanded performance analytics

LOWER IMPORTANCE / HIGH FEASIBILITY

- Categories & Tags
- Comments & Moderation
- API Testing

LOWER IMPORTANCE / LOWER FEASIBILITY

- Future enhancements not specified in the project documentation

Final Selected Focus: Secure blog management with AI-powered blog generation and content summarization, supported by role-based access, comments, categories, and tags.
