PROJECT DESIGN PHASE

Solution Architecture: AI BlogNest

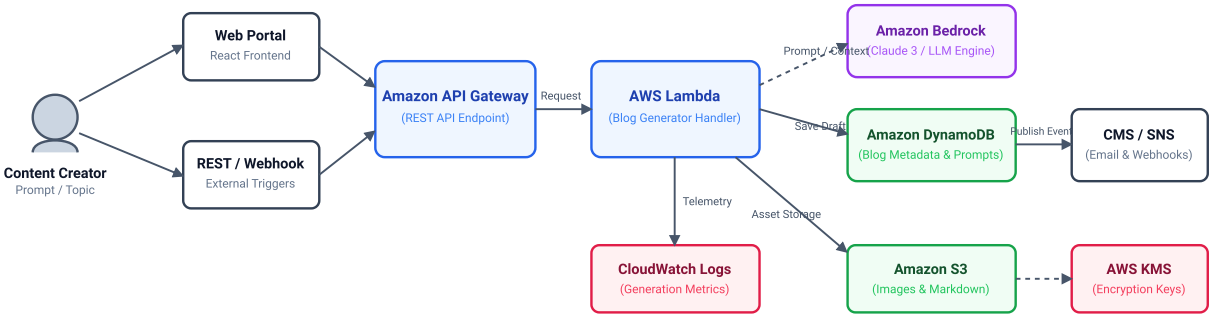

PROJECT ID	DATE	MAXIMUM MARKS
SWTID-2026-2363	29 September 2026	4 Marks

SOLUTION ARCHITECTURE OVERVIEW

Solution architecture is a complex process with many sub-processes that bridges the gap between content publishing requirements and generative technology solutions. Its primary goals are to:

- **Find the optimal serverless AI tech solution** to automate multi-channel blog generation and content workflow.
- **Describe the structure, microservices, AI pipelines, and operational behavior** of the software to stakeholders.
- **Define system features, API integration layers, automated generation phases,** and security specifications.
- **Provide actionable specifications** according to which the end-to-end solution is defined, built, and delivered.

Architecture Diagram — AI BlogNest Automated Engine

Request Option A: Interactive blog outline & article generation via Web Portal UI.
Request Option B: Scheduled or API-driven batch post generation through Webhooks.
