User Acceptance Testing (UAT)

AI BLOGNEST PLATFORM

Document Ref: UAT-FSD-01
Date: 29 September 2026

PROJECT ID	TEAM ID	VERSION	MAX MARKS
SWTID-2026-2363	**TEAM-BN-04**	**v1.2.0-RC**	**04**

1. PROJECT OVERVIEW & TESTING ENVIRONMENT

Project Description: AI BlogNest is an AI-powered content creation platform designed for automated blog post generation, intelligent SEO keyphrase integration, rich-text markdown editing, and seamless multi-channel publishing.

Testing Period: 22 September 2026 to 29 September 2026

URL / Location: https://staging.aiblognest.io

Testing Credentials: Standard User: `qa_tester@blognest.io` | Admin: `qa_admin@blognest.io`

2. TESTING SCOPE

- **AI Content Generation Engine:** Validate prompt inputs, tone control, topic extraction, and automated post outline generation.
- **Rich Text & Markdown Editor:** Verify live content editing, image insertion, tag management, and real-time word count.
- **SEO Optimization Tools:** Test keyword density auto-checks, metadata suggestions, and readability scoring.
- **Publishing & Draft Workflows:** Verify instant publishing, post scheduling, and draft state preservation across user sessions.

3. TEST CASES EXECUTION

TC ID	Test Scenario	Test Steps	Expected Result	Actual Result & Status
TC-001	AI Article Draft Generation	1. Enter topic "AI Trends" 2. Select tone "Professional" 3. Click "Generate Draft"	Full blog post generated with heading, intro, and 3 body sections within 10s.	Generated accurate 800-word draft in 6.4 seconds with proper subheadings. **PASS**
TC-002	SEO Keyword Insertion & Scoring	1. Open draft editor 2. Add target keywords: "LLM, Automation" 3. Trigger SEO Check	SEO score updates dynamically and highlights missing keywords in context.	Score updated from 45% to 88% and correctly highlighted primary keywords. **PASS**
TC-003	Rich Text Formatting & Image Upload	1. Select text and apply H2 2. Upload 2MB PNG banner image 3. Preview layout	Image compresses smoothly, embeds without distortion, and H2 tags render cleanly.	Image upload failed due to size validation error on files over 1.5MB. **FAIL**

4. BUG TRACKING & DEFECT LOG

The following issue log captures software defects, anomalies, and enhancements identified during the testing cycle.

Bug ID	Description	Steps to Reproduce	Severity	Status	Feedback / Comments
BG-001	Image upload fails for files exceeding 1.5MB threshold.	1. Open Editor 2. Click Image Upload 3. Choose 2MB PNG image	**High**	**Open**	Max upload limit should be raised to 5MB or auto-compress images client-side.
BG-002	SEO keyword density counter drops special characters.	1. Input phrase "AI/ML" 2. View keyword list in panel	**Medium**	**In Progress**	Regex parser strips slashes; dev team is updating tokenization logic.
BG-003	Draft autosave lag on weak network connections.	1. Type post copy 2. Simulate 3G network 3. Wait for autosave indicator	**Low**	**Closed**	Debounce timer adjusted from 500ms to 2000ms. Verified fixed in patch 1.2.1.

5. ACCEPTANCE & SIGN-OFF

LEAD QA TESTER

Tester Name: **Sarah Jenkins**
Completion Date: **29 September 2026**
Testing Result: **Conditionally Approved**

Signature: S. Jenkins

PRODUCT OWNER / PM

Owner Name: **Alex Reynolds**
Sign-off Date: **29 September 2026**
Deployment: **Approved with BG-001 fix**

Signature: A. Reynolds

IMPORTANT QUALITY ASSURANCE NOTES:

- Ensure all test cases cover both positive scenarios (happy paths) and edge/negative inputs prior to final release.
- Encourage testers to provide granular feedback including device specs, browser versions, and step-by-step reproduction logs.
- All High-severity bugs (such as BG-001) must be resolved and re-tested before production deployment.
- Obtain formal sign-off signatures from both the QA Lead and Product Owner before initiating production release pipelines.
